e-Convergence Solutions becomes distributor of the patented and highly certified [hiddn][™] full disk hardware encryption solutions – meeting the increasing requirements for protection of data at rest!

High Density Devices AS Norway has announced that e-Convergence Solutions will distribute the [hiddn][™] hardware encryption range of products and solutions for *protection of all data at rest* in the North American marketplace.

e-Convergence Solutions and High Density Devices (HDD) are partnering to increase the marketing and sales to the US marketplace of the range of highly certified, patented (US Patent 7,434,069) cost-effective, flexible, and user-friendly [hiddn][™] products. e-Convergence Solutions, with its US market expertise and value added services, delivers the desired level of quality and assurance expected by a market in need of data protection solutions, making for an ideal partner for High Density Devices' unique and exclusive [hiddn][™] encryption technology.

The ever-increasing amount of sensitive and critical data being stored on unprotected external storage media and personal laptops leads to high profiled data breaches and cases of loss and theft of organizational as well as customer data. One employee's negligence or one memory stick lost while travelling could have dramatic consequences if the data lost was unencrypted. With the portfolio of [hiddn][™] products, corporate, organizational and Federal users are finally introduced to a versatile, cost-effective and easy to use solution preventing data breaches, on any storage media.

"The certified and patented [hiddn][™] encryption products for protection of all data stored, represent a new dimension to our full range of cost-effective security solutions", Joseph M. Heinzen, President of e-Convergence Solutions says, continuing "and we are very excited to fully open the US market for this cost-effective technology."

With its portfolio of FIPS 140-2 Level 3 and Common Criteria EAL4+ certified products, in addition to its approval for protection of data classified NATO RESTRICTED, regulatory compliance and information assurance is made easy with [hiddn][™]!

The newly released [hiddn][™] **Crypto Adapter** provides for robust and cost-effective encryption of any USB storage media, supporting any media capacity, making it a perfect solution for protection of both memory sticks and external hard drives for backup purposes. The **Crypto Adapter** is just one of many [hiddn][™] products providing robust and accredited solutions for data protection on laptops, desktops, copy machines, printers, external hard drives, memory sticks, CDs/DVDs, as well as for specially designed solutions such as server environments, CCTV footage and UAV units.

Safeguarding your data anywhere

HDD's CSO, Mr. Trond Erik Bognoe states that *"The inclusion of e-Convergence Solutions in our US sales network is very exciting, and we look forward to work with such a quality distributor to cater for the data protection needs of American customers. With its extended reach and local know-how, we are confident that e-Convergence Solutions is the right partner for further strengthening of our [hiddn]™ Hardware Encryption offerings to the US marketplace."*

Experience the [hiddn]™ Crypto Adapter and come talk to representatives from HDD and e-Convergence Solutions at stand #2545 during the RSA USA Conference & Expo in San Francisco, CA USA, between February 14-18 2011!

Facts High Density Devices:

High Density Devices AS (HDD) has developed and patented (US Patent # 7,434,069) a unique technology for highly creative, efficient, and secure encryption of data on storage media for laptops, desktops, and mobile storage units. The solutions are easily operated, independent of Operating System, do not require maintenance, and require no configuration prior to use. It has been patented in a number of countries, and the technology and product line is trademarked as [hiddn]™ (formerly "Secured"). The company has also developed its proprietary "Key Management System" enabling larger organizations to administer and manage their own encryption keys.

[hiddn]™ has been developed in multiple form factors; as an encryption module for implementation in other manufacturers' end products, as its own product line, as a component (ASIC) for implementation in other manufacturers' products, and as a licensing solution for implementation in other manufacturers' components and/or designs.

High Density Devices AS is owned by Incitia Ventures II AS, KLP, Tønnevoild Venture & Invest AS, the Management Team, and a number of other financial and private investors. HDD has its head office in Kristiansand and offices in Oslo and Bergen, Norway. For a more detailed description of the company, its products and technology, investors, or any other information, see the HDD web page www.hiddn.no.
